Developing Your First Projects

Simple LED Blink

A classic starter project:

- Connect an LED to a GPIO pin through a resistor.
- Write a Python script using gpiozero or RPi.GPIO to toggle the LED.

Sample Python code:

```
```python
```

```
from gpiozero import LED
```

```
from time import sleep
```

```
led = LED(17)
```

```
while True:
```

```
led.on()
```

```
sleep(1)
```

```
led.off()
```

```
sleep(1)
```

```
...
```

## Sensor Data Collection

Using a temperature sensor like the DHT22:

- Connect the sensor to GPIO pins.
- Install the Adafruit\_DHT library.
- Write a script to read sensor data and log it.

## Web Server and Dashboard

Create a local web server using Flask or Node.js to display sensor data or control peripherals remotely.

## Robotics and Automation

Integrate motors, servos, and sensors to build a robot or automated system. Use libraries like pigpio for PWM control.

## Advanced Topics and Projects
