Sample Questions and Their Analysis

To understand the nature of the 2012 multiple choice questions, let's examine some representative examples, their concepts, and reasoning strategies.

Example 1: Mechanics ? Kinematics

Question: A ball is thrown vertically upward with an initial velocity of 10 m/s. Ignoring air resistance, what is the maximum height reached by the ball?

Options:

- a) 5 meters
- b) 10 meters
- c) 15 meters

d) 20 meters

Analysis:

This question tests understanding of kinematic equations. The key is recognizing that at the maximum height, the velocity becomes zero. Using $v^2 = v_0^2 - 2g h$, where $v = 0$, $v_0 = 10 \text{ m/s}$, and $g = 9.8 \text{ m/s}^2$:

[

$$0 = (10)^2 - 2 \times 9.8 \times h$$

$$h = \frac{100}{2 \times 9.8} \approx 5.10 \text{ meters}$$

]

The closest answer is (a) 5 meters.

Example 2: Electricity and Magnetism

Question: A parallel-plate capacitor is connected to a battery and charged. The plates are then separated further, increasing the distance between them. What happens to the capacitance?

Options:

a) Increases

b) Decreases

c) Remains the same

d) Becomes zero

Analysis:

Capacitance C for a parallel-plate capacitor is given by:

[

$$C = \frac{\epsilon_0 A}{d}$$

\]

where A is the plate area, d is the separation, and ϵ_0 is the permittivity of free space. Increasing d decreases C . Since the capacitor is connected to a battery (which maintains a constant voltage), the charge decreases as capacitance decreases. The correct answer is (b) decreases.
