Basic Siemens PLC Programming Examples for Beginners

Starting with simple applications helps establish foundational knowledge. Here are some practical examples ideal for beginners:

1. Turning On and Off a Motor Using a Start/Stop Push Button

Objective: Create a ladder logic program that controls a motor with start and stop buttons.

Components Needed:

- PLC (e.g., Siemens S7-1200)

- Start button (NO contact)
- Stop button (NC contact)
- Motor output coil

Implementation Steps:

- Open Siemens TIA Portal and create a new project.
- Configure your hardware and select the appropriate PLC model.
- Insert a new Main OB (OB1) program block.
- Use ladder logic to implement a seal-in circuit:
 - Place the start button contact (normally open) in series with a coil that represents the motor.
 - Connect a seal-in contact (holding contact) in parallel with the start button; this contact is linked to the motor coil itself.
 - Place the stop button contact (normally closed) in series to break the circuit when pressed.
- Download and run the program. Pressing start energizes the motor; pressing stop de-energizes it.

Practice Tip: Experiment by adding an indicator light that turns on when the motor runs.

2. Controlling a Light with a Toggle Switch

Objective: Use ladder logic to toggle a light on and off with a push button.

Implementation:

- Configure a push button input and a lamp output in TIA Portal.
- Create a latch circuit:
 - Use a set coil (S) and reset coil (R) to control the lamp's state.
 - Pressing the push button sets the latch (turns on the lamp), pressing again resets it (turns off).

Note: This example introduces concepts of memory bits and toggle logic, foundational for more advanced projects.
