Enzymes are proteins that act as biological catalysts, speeding up chemical reactions by lowering activation energy without being consumed. How is homeostasis explained in the context of the EOC review packet? Homeostasis is described as the process by which organisms maintain a stable internal environment despite external changes, through mechanisms like temperature regulation and pH balance. What are common scientific methods and experimental designs highlighted in the review guide? The guide emphasizes forming hypotheses, conducting controlled experiments, collecting data, analyzing results, and drawing conclusions as essential steps in scientific investigation.
