```
```bash
```

```
git clone --branch 11.0 https://www.github.com/odoo/odoo.git
```

```
```
```

- Create and activate a virtual environment:

```
```bash
```

```
python3 -m venv odoo-11-env
```

```
source odoo-11-env/bin/activate
```

```
```
```

```
```bash
```

```
pip install -r odoo/requirements.txt
```

```
```
```

- Set up PostgreSQL database and create a user with appropriate privileges.

Configuring the Development Environment

Create a configuration file (`odoo.conf`) to specify database connection details, addons paths, and other settings.

Developing Custom Modules in Odoo 11

Creating a New Module

Modules are the backbone of Odoo development. Here is a step-by-step guide:

- Module Structure

Create a directory for your module inside the `addons` directory:

```
...  
  
my_custom_module/  
  
??? __init__.py  
  
??? __manifest__.py  
  
??? models/  
  
? ??? __init__.py  
  
? ??? my_model.py  
  
??? views/  
  
? ??? my_model_views.xml  
  
??? data/  
  
??? data.xml  
  
...
```

- Manifest File

Define your module with essential metadata:

```
```python  

{

'name': 'My Custom Module',

'version': '11.0.1.0.0',
```

```
'summary': 'A brief description of the module',
```

```
'category': 'Tools',
```

```
'author': 'Your Name',
```

```
'depends': ['base'],
```

```
'data': [
```

```
'views/my_model_views.xml',
```

```
'data/data.xml',
```

```
],
```

```
'installable': True,
```

```
'application': True,
```

```
}
```

```
...
```

## - Models

Define data models using Odoo's ORM:

```
```python
```

```
from odoo import models, fields
```

```
class MyModel(models.Model):
```

```
    _name = 'my.model'
```

```
    _description = 'My Custom Model'
```

```
    name = fields.Char(string='Name', required=True)
```

```
description = fields.Text(string='Description')
```

```
'''
```

- Views

Create XML files for UI components:

```
```xml
```

```
my.model.form
```

```
my.model
```

My Models

```
my.model
```

```
tree,form
```

```
'''
```

## Registering and Installing the Module

After creating your module:

- Place it in the addons directory.
- Update the app list in Odoo.
- Install your module through the Apps menu.

## Advanced Customization Techniques

### Extending Existing Models

To add new fields or methods to existing models:

```
```python
```

```
from odoo import models, fields
```

```
class ResPartner(models.Model):
```

```
    _inherit = 'res.partner'
```

```
    loyalty_points = fields.Integer(string='Loyalty Points')
```

```
    ...
```

Overriding Methods

Customize existing behaviors:

```
```python
```

```
@api.model
```

```
def create(self, vals):
```

Custom logic before creation

```
record = super(MyModel, self).create(vals)
```

Custom logic after creation

```
return record
```

```
 ...
```

## Adding Business Logic

Implement constraints, automation, and workflows to enhance functionality.

## Integrating External Systems

### Connecting to APIs

Use Python's `requests` library to connect with external services:

```
```python
```

```
import requests
```

```
response = requests.get('https://api.example.com/data')
```

```
if response.status_code == 200:
```

```
    data = response.json()
```

```
    Process data
```

```
    ...
```

Importing Data

Utilize import scripts or XML data files to load external data into Odoo models.

User Interface Customization

Creating Custom Views

Design user-friendly interfaces with tree, form, calendar, and kanban views.

Using QWeb Templates

Develop dynamic reports and dashboards with QWeb:

```
```xml
```

## Report Title

```
```
```

Implementing Wizards

Create wizard models for multi-step operations, enhancing user interaction.

Testing and Debugging

Writing Tests

Leverage Odoo's built-in testing framework to ensure code quality:

```
```python
```

```
from odoo.tests.common import TransactionCase
```

```
class TestMyModel(TransactionCase):
```

```
 def test_create_record(self):
```

```
 model = self.env['my.model']
```

```
 record = model.create({'name': 'Test'})
```

```
 self.assertEqual(record.name, 'Test')
```

```
 ...
```

## Debugging Tips

- Add a new selection field for priority.
- Override the order creation process to set defaults.
- Update views to include the new field.

## Adding Custom Business Logic

For automating invoice validation:

- Write a server action triggered on invoice validation.
- Implement logic to check invoice amounts against custom thresholds.
- Notify users or trigger additional workflows.

## Integrating External APIs

Connecting Odoo to a third-party service, such as a payment gateway:

- Use Python requests to communicate with the API.
- Handle authentication and error management.
- Store API responses in custom models.
