1. Life Systems: Plants and Animals

This unit explores how plants and animals grow, adapt, and interact within ecosystems. Here are some typical questions and answers:

- **Q: What do plants need to grow?**
- **A:** Plants need sunlight, water, air (carbon dioxide), and nutrients from the soil to grow and

thrive.

- **Q: How do animals adapt to their environment?**

- A: Animals develop physical features or behaviors that help them survive in their specific habitats, such as thick fur for cold climates or camouflage to hide from predators.

- **Q: Why are pollinators important?**

- A: Pollinators, like bees and butterflies, transfer pollen from flower to flower, enabling plants to reproduce and produce fruits and seeds.

2. Structures and Processes in Living Things

Understanding how various body parts and systems function is vital.

- **Q: What is the function of roots in plants?**

- A: Roots anchor the plant in the soil, absorb water and nutrients, and sometimes store food.

- **Q: How do the lungs help us breathe?**

- A: The lungs take in oxygen from the air and remove carbon dioxide from the blood, which is essential for the body's cells to function properly.

- **Q: What are the main parts of a plant?**

- A: The main parts include roots, stems, leaves, flowers, and seeds.

3. Earth's Processes and Systems

- **Q: What are the three main types of rocks?**

- A: Sedimentary, igneous, and metamorphic rocks.

- **Q: Why do we experience different seasons?**

- A: Seasons change because the tilt of Earth's axis causes different parts of the planet to receive varying amounts of sunlight throughout the year.

4. Mixtures and Solutions

Students learn about physical combinations and how substances interact.

- **Q: What is the difference between a mixture and a solution?**

- A: A mixture consists of two or more substances that are physically combined but not chemically bonded, like sand and water. A solution is a type of mixture where one substance dissolves in another, like sugar in water.

- **Q: How can we separate a mixture?**

- A: Methods include filtering, evaporation, or using magnets for magnetic materials.

- **Q: Why do some substances dissolve in water while others do not?**

- A: Substances that dissolve in water have particles that can interact with water molecules, while insoluble substances do not dissolve due to their chemical properties.

5. Forces and Motion

Understanding how objects move is fundamental.

- **Q: What is gravity?**

- A: Gravity is the force that pulls objects toward the center of the Earth, giving weight to objects and causing falling motion.

- **Q: What are simple machines?**

- A: Simple machines, like levers, pulleys, and ramps, help us do work more easily by changing the direction or amount of force needed.

- **Q: How does friction affect movement?**

- A: Friction opposes motion between surfaces, which can slow down moving objects or cause them to stop.
