"First, I would conduct a hazard assessment to identify potential risks. I would ensure all workers wear appropriate PPE, including helmets, gloves, and safety glasses. I would keep the work area clean and free of debris to prevent trips and falls. I would also verify that machinery and tools are in good working order and follow the site's safety protocols. In case of an emergency, I would know

the location of fire exits and first aid kits, and ensure everyone is aware of emergency procedures."

Measuring, Marking, and Layout

- Question: Explain how to accurately mark out a wall frame on the ground.
- Sample Answer:

"I would start by reviewing the plan drawings to identify the accurate measurements. Using a tape measure and a chalk line, I would mark the positions of the wall corners on the ground, ensuring these are aligned with the plan. I would use a framing square to check right angles at corners. I would double-check measurements from the reference points to confirm accuracy before proceeding with positioning the wall plates."

Framing and Structural Components

- Question: How do you ensure your wall frames are square?
- Sample Answer:

"To ensure the wall frame is square, I would measure diagonally from corner to corner. The measurements should be equal; if not, I would adjust the position of the studs or plates accordingly. Using a carpenter's square at key points confirms right angles. I also ensure that all components are aligned using a spirit level and that the frame remains plumb throughout construction."
