Sample Breakdown of Typical Chapter Questions and Their Answers

Chapter 1: The Economics of International Trade

Question: Explain the principle of comparative advantage and how it benefits trading countries.

Answer Overview:

- Comparative advantage occurs when a country can produce a good at a lower opportunity cost than another.
- Trade allows countries to specialize according to their comparative advantages.
- Benefits include increased overall efficiency and higher standards of living.
- Key Point: Even if one country is more efficient at producing all goods (absolute advantage), both can still benefit from trade through comparative advantage.

Approach Tips:

- Use a simple numerical example to illustrate opportunity costs.
- Draw a diagram showing production possibilities frontiers (PPFs).
- Emphasize the concept of mutually beneficial trade.

Chapter 4: Trade Policies and Welfare

Question: What are the welfare effects of imposing a tariff on imported goods?

Answer Overview:

- A tariff raises the domestic price of the imported good.
- Consumers face higher prices and reduced consumption.
- Domestic producers may benefit from increased sales.
- The government gains revenue from the tariff.
- Deadweight loss occurs due to reduced efficiency and lost gains from trade.
- Overall welfare may decline because the gains to producers and government are often offset by losses to consumers.

Approach Tips:

- Use supply and demand diagrams to show changes.
- Highlight the concept of consumer surplus, producer surplus, and deadweight loss.
- Discuss the political economy reasons for tariffs despite welfare losses.

Chapter 5: Exchange Rates and International Finance

Question: Describe how a country's balance of payments is affected by changes in the exchange rate.

Answer Overview:

- An appreciation of the domestic currency makes exports more expensive and imports cheaper.
- Exports tend to decrease, and imports tend to increase, leading to a worsening trade balance.
- Conversely, a depreciation makes exports more competitive and imports more expensive, improving the trade balance.
- The overall balance of payments adjusts through changes in the current account and capital flows.

Approach Tips:

- Diagram the supply and demand for foreign exchange.
- Explain the link between exchange rate movements and trade flows.

Question:

Suppose Country A and Country B produce two goods, X and Y. Country A has a comparative advantage in good X, while Country B has a comparative advantage in good Y. Using the principles from Feenstra and Taylor, explain the potential gains from trade between these countries and illustrate this with a graph.

Step 1:

Identify the comparative advantage of each country.

Step 2:

Explain the concept of gains from trade, emphasizing increased consumption possibilities.

Step 3:

Draw a Production Possibility Frontier (PPF) for both countries, showing their opportunity costs.

Step 4:

Construct an Edgeworth box or trade triangle to illustrate mutually beneficial trade.

Step 5:

Discuss how trade allows both countries to specialize and consume beyond their PPFs.

Answer Overview:

Trade enables Country A to specialize in producing good X, where it has a comparative advantage, and exchange some of it for good Y from Country B. Both countries can reach higher levels of utility and consumption than under autarky. Graphically, the trade line or contract curve demonstrates the efficient allocation resulting from specialization and exchange.
