Getting Started with Programming on the BeagleBone Black

Writing Your First Python Script

Python is the most accessible language for beginners on the BBB.

Steps:

- Open a terminal session.
- Create a new Python file:

```bash
nano hello_beaglebone.py
```

- Add the following code:

```python
print("Hello, BeagleBone Black!")
```

- Save and run:

```bash
python3 hello_beaglebone.py
```

This simple program outputs a message, confirming your environment is ready.

Controlling GPIO Pins with Python

GPIO (General Purpose Input/Output) pins allow you to connect sensors, LEDs, and other peripherals.

Example: Blinking an LED

- Connect an LED with a resistor to a GPIO pin (e.g., P8_13).
- Install the necessary Python library:

```bash

sudo apt update

sudo apt install python3-dev python3-pip

pip3 install Adafruit_BBIO

```

- Write a blinking script:

```python

import Adafruit_BBIO.GPIO as GPIO

import time

LED_PIN = "P8_13"

GPIO.setup(LED_PIN, GPIO.OUT)

try:

while True:

GPIO.output(LED_PIN, GPIO.HIGH)

time.sleep(1)
```

```
GPIO.output(LED_PIN, GPIO.LOW)

time.sleep(1)

except KeyboardInterrupt:

GPIO.cleanup()
```

- Run the script:

```bash
python3 blink.py
```

This demonstrates basic hardware control, a fundamental aspect of embedded programming.

Understanding these features allows programmers to leverage the hardware effectively, whether reading sensor data, controlling actuators, or communicating with other devices.

Initial Setup and Booting

Getting started with the BeagleBone Black involves preparing the hardware, installing an operating system, and establishing a development environment.

Hardware Preparation

- Power Supply: Use a 5V DC power supply capable of delivering at least 2A to ensure stable operation.
- MicroSD Card: Obtain a microSD card (preferably Class 10, 8GB or larger) for OS installation.
- Peripherals: Connect a monitor via HDMI, a keyboard, and a mouse for initial setup.
- Network Connection: Ethernet cable or Wi-Fi (via USB dongle or onboard Wi-Fi, depending on the model).

Installing the Operating System

The BeagleBone Black supports several OS options, but the most common is a Debian-based image provided by the BeagleBoard community.

Steps for OS Installation:

- Download the latest Debian IoT image from the official BeagleBoard website.
- Use a tool like Balena Etcher or Win32 Disk Imager to flash the image onto the microSD card.
- Insert the microSD card into the BeagleBone Black.
