- Understand the implications of different investment classifications
- Comply with accounting standards such as ASC 320 (Financial Instruments?Investments) and ASC 321 (Investments?Equity Securities)

Key Concepts and Principles in Chapter 23

1. Classification of Investments

Investments are categorized based on the company's intent and the nature of the securities:

- Held-to-maturity (HTM): Debt securities that the company intends and is able to hold until

maturity. These are recorded at amortized cost.

- Trading securities: Debt or equity securities bought primarily for short-term profit. These are recorded at fair value, with unrealized gains and losses included in earnings.
- Available-for-sale (AFS): Securities not classified as HTM or trading. These are recorded at fair value, with unrealized gains and losses reported in other comprehensive income.

2. Recognizing and Measuring Investments

- Initial recognition occurs at fair value plus transaction costs.
- Subsequent measurement depends on classification:
 - HTM: Amortized cost
 - Trading & AFS: Fair value, with unrealized gains/losses adjusted accordingly

3. Impairment of Investments

- When the fair value falls below amortized cost or carrying amount, an impairment loss is recognized.
- The loss is recognized in earnings (for HTM and trading securities) or in other comprehensive income (for AFS securities), depending on the circumstances.

4. Sale and Disposal

- Gains or losses are recognized when securities are sold.
- The sale affects the classification and measurement of remaining securities.

5. Equity Method of Accounting

- Applied when an investor has significant influence (generally 20% to 50% ownership).
- The investment is initially recorded at cost.
- The investor recognizes its share of the investee's earnings or losses, adjusting the carrying amount accordingly.

Step-by-Step Guide to Solving Chapter 23 Problems

Step 1: Determine the Investment Classification

Identify whether the security is classified as held-to-maturity, trading, or available-for-sale based on

management's intent and the nature of the security.

Step 2: Record Initial Purchase

- Debit: Investment in securities
- Credit: Cash
- Include transaction costs in the purchase price if applicable.

Step 3: Record Subsequent Measurement

- For HTM: Use amortized cost method.
- For Trading and AFS: Adjust fair value at each reporting date.
- Recognize unrealized gains or losses accordingly.

Step 4: Recognize Impairments

- Assess whether the decline in fair value is other-than-temporary.
- Record impairment loss in earnings or other comprehensive income.

Step 5: Record Sale or Disposal

- Remove the security from the books.
- Recognize any realized gain or loss based on the difference between sale proceeds and carrying amount.

Step 6: Applying the Equity Method

- Adjust the investment account for the investor's share of the investee's net income or loss.
- Record dividends received as a reduction of the investment account.

Common Problems and Solutions in Chapter 23

Problem 1: Recording Purchase of Securities

Scenario: A company purchases 1,000 shares of stock for \$50 each, paying \$2,000 in transaction costs.

- Credit: Cash \$52,000

Problem 2: Fair Value Adjustment for Trading Securities

Scenario: At year-end, trading securities are valued at \$55,000, but the book value is \$50,000.

Solution:

- Record:

- Debit: Fair value adjustment (Trading Securities) \$5,000
- Credit: Unrealized gain (Income) \$5,000

Problem 3: Recognizing Impairment

Scenario: An available-for-sale security's fair value drops from \$30,000 to \$20,000, and the decline is deemed other-than-temporary.

Solution:

- Recognize impairment loss:
