Evolution and Adaptation

The book discusses the evolution of behavior through the lens of natural selection, kin selection, and sexual selection. Notably, Alcock explores how behavioral traits can be subject to evolutionary pressures similar to morphological traits, supported by examples ranging from bird song dialects to insect mating dances.

Mechanisms and Proximate Causes

The section on proximate mechanisms meticulously details sensory receptors, neural pathways, and hormonal regulation. Alcock emphasizes the importance of understanding the neurobiological basis of behavior, incorporating recent discoveries about neural circuitry in various species.

Learning and Development

A significant strength of the text is its comprehensive treatment of learning processes, including classical conditioning, operant conditioning, imprinting, and social learning. The chapter highlights both experimental paradigms and naturalistic observations, illustrating how behavior is shaped by experience.

Communication and Signaling

The chapter on communication covers chemical, visual, auditory, and tactile signals, illustrating their role in mate choice, territoriality, and social cohesion. Alcock discusses the evolution of signals and the concept of honest signaling versus deception, integrating examples such as peacock displays, bird calls, and insect pheromones.

Social and Cooperative Behavior
